

Sleep related movement disorders: association to pregnancy & menopause

Filesize: 4 MB

Reviews

This type of publication is every thing and helped me seeking ahead and much more. It usually fails to charge too much. It is extremely difficult to leave it before concluding, once you begin to read the book.

(Juliet Mertz)

SLEEP RELATED MOVEMENT DISORDERS: ASSOCIATION TO PREGNANCY & MENOPAUSE

Condition: New. Publisher/Verlag: Scholar's Press | Willis-Ekbom Disease (WED), also known as Restless legs syndrome (RLS) gives uncomfortable sensations in the legs at rest, leading to an irresistible need for activity. It aggravates in evening and at night. Therefore, RLS provides poorer sleep and can affect quality of life through fatigue, family life and social activities, work, and co-morbidity. It is demonstrated a dysfunction of the dopaminergic system in the brain with low levels of dopamine and / or less sensitive dopamine receptors. RLS is more common in women and the prevalence increases with age and during pregnancy. Depression is common during and after pregnancy. It is not known whether women with RLS during pregnancy have a higher risk of peri- or postnatal depression. The aims of this thesis was to to examine prevalence, associated symptoms and comorbidities, in particular, vasomotor symptoms, menopause, and HRT use, among women who suffer from RLS. In summary, data included in this thesis shows that RLS are more common in women with estrogen deficiency-related symptoms of menopause. Data also shows that women with RLS during pregnancy are at increased risk for depression during and after pregnancy. | Format: Paperback | Language/Sprache: english | 218 gr | 220x150x8 mm | 152 pp.
